What the agent noticed

62% of new value comes from annual price-uplift clauses in 2021–22 contracts. They share one signature: rate plans migrated to the new billing system in Nov 2024 lost their escalation schedules.

41 more contracts match that signature. They're queued for tonight's run, so the root cause is fixed once, not 41 times.

Brightwater Retail renews in 74 days and is high churn risk. Consider bundling its back-bill into the renewal rather than invoicing now.

From last night's run

1

62% of new value traces to one cause: the Nov 2024 billing migration dropped escalation schedules.
[View 26 findings](#)

2

41 more contracts from that migration are queued for tonight.
[See contracts](#)

3

Brightwater renews in 74 days at high churn risk. Hold its back-bill for the renewal.

v1 looks generated because it styles every element; v2 styles only the data

Same palette, same content, same information architecture. What changed is typography, density and restraint, following how Stripe's dashboard treats a work surface: one typeface, tabular numbers, quiet chrome, colour only where it means something.

Area	What's wrong in v1	What v2 does
Typefaces Brand & type	Three families: Instrument Serif headlines, Plex Sans body, Plex Mono numbers. A display serif on a data screen is the current "AI product" signature, and it competes with the figures.	One family, Geist, as a free stand-in for Stripe's Söhne. Weights 400–600 only. Mono kept for run IDs, never for money.
Numbers Brand & type	Amounts in monospace look like code and sit on a different baseline from their labels.	Tabular figures in the same sans, so columns align without looking technical. Tight letter-spacing on large values.
Labels Product design	Uppercase, letter-spaced micro-labels on every card and column. It's a template tell and slows reading.	Sentence case at 12–13px, muted colour. Hierarchy comes from size and weight, not caps.
Headline Product design	A 40px serif sentence takes 130px and says what the table already shows.	28px greeting, with the run facts on one line underneath. "Start review" is the primary action, top right.
KPIs Data design	Five identical cards: nothing says which number matters most.	One panel with dividers. Open recoverable is wider and larger; the delta is coloured only when it's a change.
Colour Product design	Round pills everywhere: priority, type, confidence colour, churn. With five tinted pills a row, nothing stands out.	Priority is the only badge per row, with 4px corners. Type is plain text; confidence is a number plus a thin bar.
Table density Data design	76px rows with three text lines and a button in each: 7 rows fill the screen.	56px rows, two lines, the whole name links to the finding. Evidence moves into the detail view.
Filtering Product design	Two generic buttons ("All types", "Bulk approve") with no sense of what's in the queue.	Segmented counts (All 23 · P1 3 · Needs judgment 1), dashed "+ filter" chips, checkboxes for bulk actions.
AI voice Content design	A sparkle icon and "What the agent noticed" in serif. Novelty styling makes the insight look less trustworthy.	"Insights", numbered, each with its action link and the run ID it came from. The provenance does the persuading.
Chrome Product design	Heavy tenant button, 28px serif logo, credits card in the sidebar, a primary green "Ask the agent" in the top bar competing with the work.	Slimmer nav with 16px line icons, tenant as a quiet switcher, "Ask Accrue" as a secondary button with its shortcut.
Accessibility Accessibility	Priority relied partly on colour; a Review button in every row meant 7 extra tab stops.	Priority is text (P1/P2/P3) inside the badge; the row's link and checkbox are its only stops. Contrast of muted text stays above 4.5:1.

Kept from v1

Dark sidebar, warm off-white page, green primary, the red/amber/green status set. The queue ranking, the insight content and the right-rail order.

Still open

License Söhne or pick Geist for good. Test 56px rows with analysts who review 40+ findings a day. Decide if "Agent precision" belongs on the analyst's home or the Agents page.
